Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Currently amended) A method of making an OLED device comprising:

a) forming a color filter array over ~~one~~ a first surface of a substrate;

b) forming ~~by an evaporation process~~ an anode over the first or a second surface of the substrate and a hole-transporting layer over the anode;

c) moving one or more coated donor elements into a transfer position relative to the hole-transporting layer and transferring emissive material from the donor elements onto the hole-transporting layer to form ~~a~~ one or more unpatterned light-emitting layer(s) which ~~is~~ are capable of emitting white light; and

d) ~~coating by an evaporation process~~ forming a cathode over the one or more unpatterned light-emitting layer(s).

2. (original) The method of claim 1 wherein the donor element is a flexible web having a series of coated patches of transferable emissive material which are sequentially moved to the transfer position and heated by radiation to cause material transfer.

3. (withdrawn) A donor element comprising a donor support, and a layer formed over the support having a mixture of two transferable colorant components which, when transferred, will form a single white light-emitting layer for an OLED device.

4. (original) In a method of manufacturing an OLED device, which emits white light, comprising:

a) providing a flexible donor support, and transferring to such donor support heat-transferable materials which are capable of forming one or more light emitting layer(s) which produce ~~a~~ white ~~light-emitting layer~~ in an OLED device, ~~and~~

b) inspecting the coated donor support prior to material transfer; and

c) moving the coated donor support into a transfer position with the OLED device and forming an unpatterned light-emitting layer(s).
